

# CERTIFICATE OF BIODEGRADABILITY

## *Scattering Tubes*

Passages® Scattering Tubes do not contain any metal or plastic components and are made primarily from recycled materials, making them fully biodegradable and recyclable. They are designed to be scattered from but can be used for biodegradable burial. When placed in water they will likely float for an extended period and so scattering from the Tube is always suggested. Follow local and national regulations when using. When buried they will break down naturally over time.
